

**PROJECT DESCRIPTION  
KISOR RECLAMATION  
JACKSON COUNTY, OHIO**

**PROJECT NUMBER JK-MI-67**

**Project Description**

This project entails rerouting an existing channel away from a residence in an effort to reduce flooding. The watershed above the project site was surface mined between the 1950's and 70's. The surface mined area has since been reclaimed, however, a downstream section of channel has begun to erode the soil and storm flows are transporting sediment to the channel adjacent to the residence. This sediment blocks the road culvert and channel, which leads to local flooding. Rerouting the channel to an adjacent low lying area and using a two stage channel cross section will give the sediment and flood water a place to pool before entering the adjacent Mulga wetland. All disturbed areas will be revegetated. Additionally, the three road culverts in the project limits will be replaced with low water crossings to facilitate storm flow conveyance and maintenance.

The Kisor Reclamation project is located in Jackson County, Milton Township, and Section 10. Site access shall be from Hollingshead Road. This project shall comply with all applicable permits including but not limited to a US Army Corps of Engineer's Nationwide 27 Permit for aquatic habitat restoration.

Major work items in this project include but are not limited to approximately 550 CY of Earthwork, 81 TONS of ODOT Crushed Limestone, and 554 SY of permanent channel lining.
